

What's YOUR 9 year climate plan, now that it is even clearer that the Earth needs our help NOW?

How many of these things can you do
before we ring in the Year 2030?

1 Get the electricity you need from renewable resources

Go to sites like [this](#) to sign up for clean, sustainable electricity. Community solar may be a future option.

2 Go solar at your home or business

Learn the basics [here](#) under "Go Solar." Look at the pdf there to learn how it works and things to consider.

3 Exchange that combustion engine for an electric vehicle,

saving yourself money on maintenance. Go to [here](#) to find out what cars and rebates are available.

4 Switch out your fossil-fuel heating system with a cold climate air source heat pump & lessen your operating costs.

Go [here](#) or [here](#) to learn about the technology and rebates.

5 Exchange your hot water heater for a hybrid electric one,

reducing summer humidity and saving on energy bills. Go [here](#) to learn about these water heaters.

6 Cut back on plastics.

Try any way you can to avoid them. Learn more [here](#) and [here](#) to find out more about how harmful plastics are and what you can do.

7 Cut back on flying.

See [this](#) link to learn more. When it comes to CO2-emissions per passenger per distance, flying is second to none. **When you must,** go [here](#) to offset your impact.

8 Think before you buy as to whether you could get it used

online or on the island. Or, borrow instead of buying one for yourself. Go [here](#) to learn about consumption impacts.

9 Stop investing in companies who are damaging our planet.

Read about the companies that you are investing in and don't support any fossil-fuel exploration, extraction or combustion.

Climate change is happening faster than anticipated.

What we do NOW will define the future for
our children and grandchildren.

You may not be able to do all of these things immediately,
but with a plan they are all achievable!
